DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance: The prior art of record alone or in combination fails to teach or fairly suggest applicant's claimed invention.

3. Particularly, the applicant claims among other things "a reflector portion having a stepwise reflection surface on at least a part of the reflector portion in which there are alternately formed a plurality of light incidence sections into which the collimated light enters and a plurality of intermediate sections into which no collimated light enters; **and at least a portion of the intermediate sections is formed from an irregular surface formed so as to recess rearward of the lamp with respect to a plane parallel to the direction of radiation of the collimated light.**"

The prior art of record which is most similar to applicant's invention is taught by Jenkins et al. Jenkins et al discloses a light source 34 and an optical member 40 for converting light originating from the light source 34 into collimated light, and a reflector portion 42' for reflecting the collimated light exiting from the optical member 34 forward of the lamp. The reflecting facets 42' are regular surfaces and gradually and evenly slope upwards away from the lamp towards the output side.

Art Unit: 2875

The applicant distinguishes from Jenkins et al and the other prior art of record by further teaching “the reflector portion having a **stepwise reflection surface** (for example 16a in figures 3-4) on at least a part of the reflector portion in which there are alternately formed a **plurality of light incidence sections** (for example 16g in figures 3-4) into which the collimated light enters and a **plurality of intermediate sections** (for example 16s in figures 3-4) into which no collimated light enters; and at least a portion of the intermediate sections is formed from an **irregular surface** formed so as to recess rearward of the lamp with respect to a plane parallel to the direction of radiation of the collimated light.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Boyd et al '016 and '874, Whitney et al and Fohl et al '340 and '078 all disclose lamp assemblies which are similar to applicant's invention.
